12 slides of the Business Counter pitch deck.

1. Title
BUSINESS COUNTER: *Know your business, wherever you are.*
Smart shop monitoring and inventory management. Pitch Deck • Founder: Mohamed Hassan • Kenya

2. The Problem
When shop owners are away, they often rely on employees or handwritten records to understand what is happening in the business.

- **Limited visibility:** Owners may not know what sold today or what stock remains.
- **Unexpected stock-outs:** Fast-selling products can finish before anyone notices.
- **Unclear records:** Sales, returns and stock changes can be hard to verify.
- **Difficult growth:** Monitoring several shops becomes complicated.

3. Our Solution
Business Counter is a web-based platform that lets shop owners check sales, stock and employee activity from a phone or computer.

- **See sales:** Review daily, weekly and monthly sales.
- **Know stock:** See quantities remaining and low-stock items.
- **Act early:** Get alerts before important products run out.
- **Stay informed:** Review employee actions and adjustments.

One dashboard. Clearer decisions. Fewer surprises.

4. Market Opportunity
Help Kenyan small and medium-sized retailers move from informal records to clear, timely business information.

- **Start locally:** Talk to shop owners and test the most important daily tasks.
- **Validate demand:** Measure whether the system saves time and improves stock accuracy.
- **Expand carefully:** Grow through referrals after proving value with pilot customers.

Market size and demand figures will be researched and validated before launch.

5. The Product: How It Works

1. **Owner sets up products:** Enters product names, buying/selling prices, quantities and minimum stock levels.
2. **Employee records sales:** Uses an individual account to record sales, returns and approved adjustments.

3. **Stock updates automatically:** The system reduces the recorded quantity sold from available inventory.
4. **Owner checks the dashboard:** Views sales, remaining stock, alerts and reports remotely.

6. Target Customers

Shop owners who want to manage inventory and sales while away from their premises.

- **Grocery & mini-markets:** Frequent sales and daily restocking.
- **Cosmetics & household shops:** Many different products to keep track of.
- **Clothing & accessories:** Stock variations such as size and colour.
- **Multi-shop owners:** One account to view several locations.

Initial focus: small and medium-sized retail shops in Kenya.

7. Business Model

Revenue mainly through monthly subscriptions. Prices are assumptions to test with customers.

- **BASIC, KSh 500/month:** One shop, stock tracking, sales summaries
- **STANDARD, KSh 1,000/month:** More reports, employee activity, expense tracking
- **PREMIUM, KSh 2,000/month:** Multiple shops, advanced reports, priority support

Final pricing will depend on pilot feedback and customer willingness to pay.

8. Competition & Advantage

Alternatives include notebooks, spreadsheets, cash registers and existing point-of-sale systems.

- Simple interface for shop owners and employees
- Remote sales and stock visibility on a phone
- Low-stock and fast-selling alerts
- Individual employee accounts and activity history
- Local onboarding and practical support

Build around real shop-owner needs, keep the first version easy to use, and improve it through pilot feedback. *We will research competitors before claiming our product is cheaper or better.*

9. Traction & Validation Plan

Currently at the idea and first-draft stage. Next step is to validate the problem with real shop owners.

- **Interview 10–20 owners:** Understand how they currently record sales, stock and employee activity.
- **Test a simple prototype:** Ask shop owners and employees to try the main workflow.
- **Measure useful outcomes:** Check ease of use, record accuracy and time saved.

No paying customers or pilot results are claimed yet.

10. Team

- **Mohamed Hassan, Founder:** Leads the business idea, customer research, product direction and pilot planning.
- Skills and support needed: web developer, UI/UX designer, retail adviser, marketing support.

The initial team will remain small and add skills as the product grows.

11. Financial Plan

Illustrative monthly revenue if every shop pays the Basic price of KSh 500:

- 20 shops → KSh 10,000
- 100 shops → KSh 50,000
- 500 shops → KSh 250,000

Main costs: website development, hosting and security; maintenance and customer support; marketing and payment-processing fees.

These are revenue scenarios, not profit forecasts.

12. The Ask

Help us build a better way to run a shop.

Vision: Every shop owner can understand their business, even when they are away.

We are looking for: technical mentorship and development support; access to pilot shops and retail-business feedback; resources to build and test the first version.

Every slide also carries the tagline “Your Shop. Your Numbers. Your Control.” in the footer.

I can also save this as a Word doc or text file, or pull out just specific slides, if that’s useful.
